PROFILE

GIS Specialist and Geospatial Developer with 5+ years of experience turning spatial data into Web GIS applications, Earth-observation tools, and decision-support models. Agricultural Engineer, now completing an MSc in Geoinformatics at Eötvös Loránd University as a Stipendium Hungaricum scholar. Comfortable across the whole workflow: spatial analysis and modelling, automation in Python/R and PostGIS, Google Earth Engine, and browser-based mapping with Leaflet/OpenLayers. Experienced with national-scale statistical data and multicultural teams across Latin America and Europe. Open to remote work.

CORE SKILLS

- **GIS & Spatial Analysis:** ArcGIS, QGIS, PyQGIS, GeoDa, CloudCompare; spatial statistics (Moran's I, LISA), gravity & accessibility modelling
- **Programming & Data:** Python (GeoPandas, Rasterio, NumPy, GDAL/OGR), R, SQL
- **Remote Sensing & Earth Observation:** Google Earth Engine, Landsat 8/9, MODIS, Sentinel, GRASS GIS, LiDAR point-cloud processing
- **Databases & Servers:** PostgreSQL/PostGIS, SQL Server, GeoServer, OGC standards (WMS, WFS, tiles)
- **Web Mapping & Development:** HTML, CSS, JavaScript, Leaflet, OpenLayers, Git/GitHub
- **Documentation & Delivery:** technical documentation, reproducible workflows, bilingual delivery (EN/ES)

SELECTED PROJECTS

Lake Balaton Surface Temperature Monitor — Google Earth Engine web app that detects satellite-derived lake-surface-temperature anomalies against a 2003–2022 climatology, combining Terra/Aqua MODIS, Landsat 8/9 and ERA5-Land. jtantaroman.users.earthengine.app/view/lake-balaton-lst-monitor

Caribbean Tsunami Propagation Explorer — reconstruction of regional tsunami travel times for the 1918 Puerto Rico earthquake using GEBCO 2025 bathymetry, a custom gnomonic projection and a least-cost propagation model, delivered as a browser animation with timeline playback. Python, QGIS, GRASS GIS, GDAL, Rasterio, Leaflet. jeisontantachuco.github.io/caribbean-tsunami-propagation-explorer

Geospatial Isochrone Viewer — interactive app that computes travel-time catchment areas and the population within them, integrating a routing API with a PostGIS backend. Leaflet, OpenRouteService, PostgreSQL/PostGIS. isocronapoblacion.vercel.app

PROFESSIONAL EXPERIENCE

GIS AI Trainer — micro1 (Consultant) Mar 2026 – Aug 2026
Remote

- Designed 30–40 QGIS geospatial tasks end to end (problem statements, input data, deliverables and grading rubrics) across raster, vector, remote sensing, hydrology and cartographic mapping.
- Reviewed and validated 40–50 QGIS workflows submitted by GIS specialists from a global pool of ~200 contributors.
- Documented spatial-analysis reasoning, troubleshooting and quality-control checks to support AI training on professional GIS workflows.

GIS Intern — AUMOVIO Nov 2025 – Jun 2026
Budapest, Hungary

- Mapped, segmented and classified LiDAR-derived point clouds within a ~3-block radius of parking facilities: 2D features (parking slots, lane markings, poles, walls, stop lines) and 3D objects (pedestrians, cars, two-wheelers; stationary and moving), using CloudCompare and QGIS.
- Built a QGIS/Python script that generates standardized GeoJSON outputs for the 2D mapping workflow and shared it with the team (with team-lead approval) to remove repetitive setup.

GIS Analyst — Intercorp Retail Jun 2023 – Aug 2025

Lima, Peru

- Built and deployed 2 interactive Web GIS applications/dashboards used by cross-department stakeholders for site selection and spatial decision-making.
- Developed backend geospatial workflows in PostgreSQL/PostGIS over national datasets of ~300k–400k records (demographic, socioeconomic and spatial).
- Evaluated 20–30 candidate store locations per week using gravity-model and comparative analysis for predictive site selection.
- Replaced a manual ~2-minute Excel process with an event-driven PostGIS trigger that recomputes the population and income contained in any service polygon drawn or edited in QGIS: results in seconds, kept in sync automatically on every edit.

Cartographic Analyst — National Institute of Statistics (INEI) Oct 2020 – May 2023

Lima, Peru

- Processed climate and demographic indicators (precipitation, temperature, UV) for ~94,000 populated centers nationwide using Google Earth Engine.
- Ran nationwide accessibility analyses across 1,800+ districts, plus geocoding and urban socioeconomic stratification with Python and GIS.
- Designed integration procedures for census and administrative databases (~1 million records) using SQL, spatial joins and string-matching algorithms.
- Coordinated with project leads on national operations including the Economic Census (CENEC) and the Venezuelan Population Survey (ENPOVE).
- Applied spatial statistics (Moran's I, LISA) to survey and urban-polygon data and automated processing with reproducible scripts.

Technical Assistant — SUYO S.A.C. Jan – Feb 2019

Lima, Peru

- Reviewed Territorial Conditioning and Urban Development Plans and helped structure geospatial databases for regional planning.

EDUCATION

MSc in Geoinformatics — Eötvös Loránd University, Budapest, Hungary | Sep 2025 – Jun 2027

Stipendium Hungaricum Scholar · Faculty of Informatics

Diploma of Expertise in Web Map Application Programming (18 ECTS) — University of Girona Foundation: Innovation and Training, Spain | Feb 2025 – Jun 2025

BSc & Professional Degree, Agricultural Engineering — Universidad Nacional Agraria La Molina, Lima, Peru | 2014 – 2019

LANGUAGES

- **Spanish** — Native
- **English** — B2 (IELTS 6.5, 2024)
